

Old Fashioned Craftsmanship With Modern Composites Technology

# Integrated Cross

*Test was conducted with a standard production Steeple not a special "Test Steeple".*

**160 Lbs. !!!**

***PFI Exclusive***

After the test was completed the Cross flexed back to its original position with **No Permanent Damage.**

## Why is an Integrated Cross Important?

- Cross will not tilt
- Cross will not warp
- Cross will not rotate
- Smooth transition from Spire to Cross

## How is the Cross Attached?

- Our Fiberglass Crosses are permanently integrated into the Spire with Fiberglass and High Performance Composites Adhesives.
- This produces a permanent bond with similar materials.
- No bolting, threading, pins, or the need to "shim" for proper alignment.
